Conclusion

Implement Client Script & UI Policy (Incident)

Problem Statement

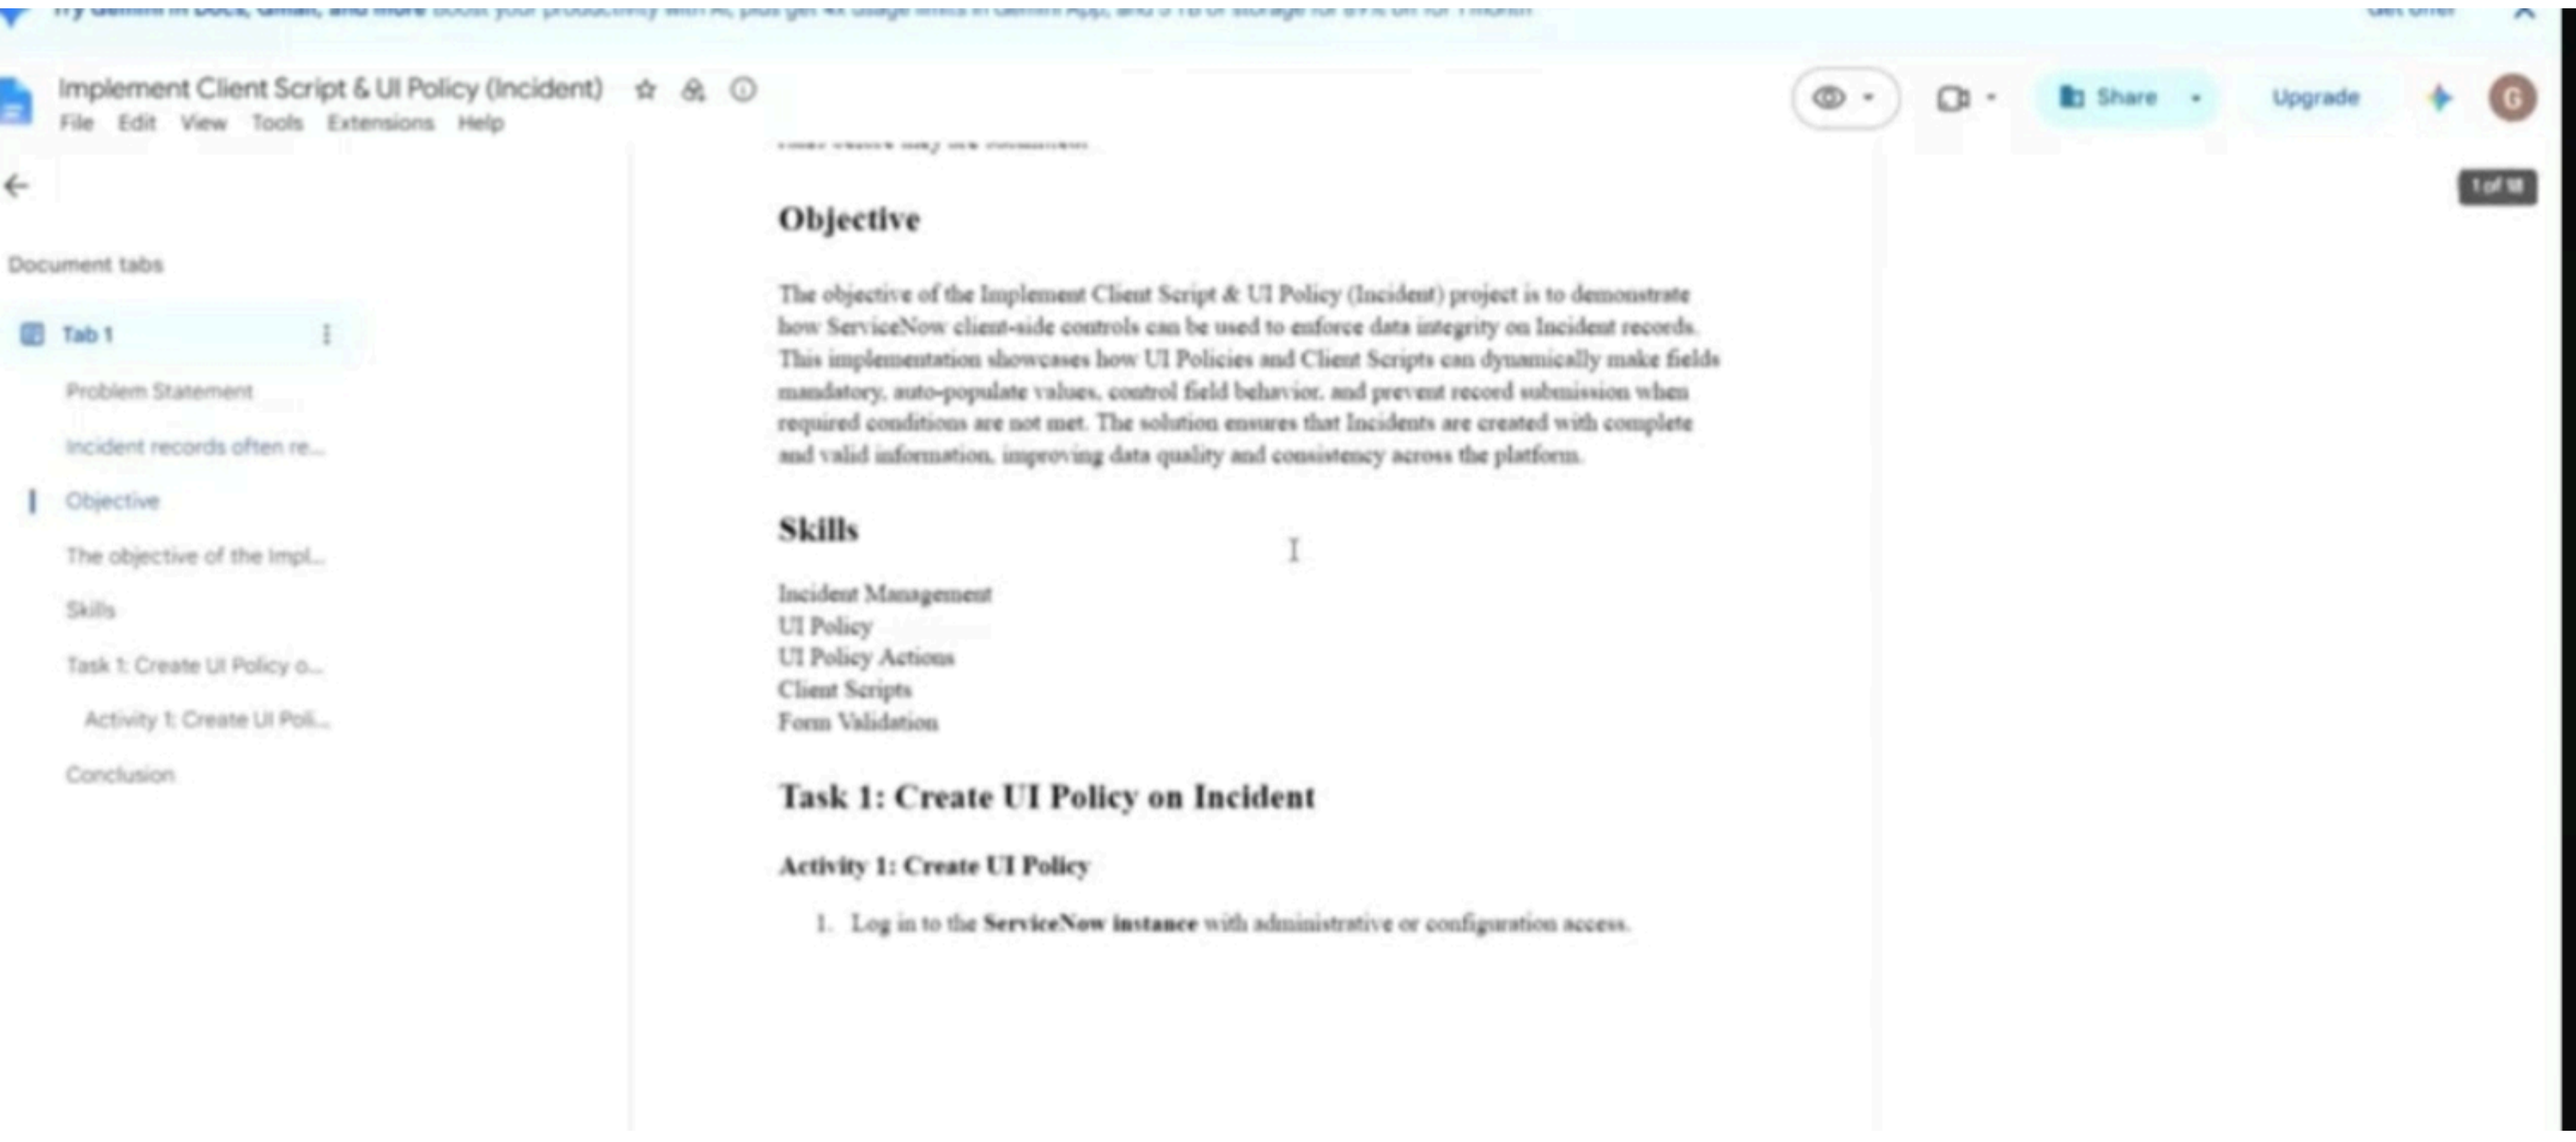

Incident records often require consistent and accurate data entry to ensure effective triage, routing, and resolution. However, relying solely on user awareness and manual checks can lead to incomplete, inconsistent, or incorrect data being submitted. This can impact reporting accuracy, SLA compliance, and overall service quality. To address this challenge, there is a need to enforce conditional field behavior and validation directly at the user interface level. Implementing standardized UI Policies and Client Scripts helps control field visibility, mandatory status, and save-time validation, ensuring that Incident records meet defined business rules before they are submitted.

Objective

The objective of the Implement Client Script & UI Policy (Incident) project is to demonstrate how ServiceNow client-side controls can be used to enforce data integrity on Incident records. This implementation showcases how UI Policies and Client Scripts can dynamically make fields mandatory, auto-populate values, control field behavior, and prevent record submission when required conditions are not met. The solution ensures that Incidents are created with complete and valid information, improving data quality and consistency across the platform.

Task 1: Create UI Policy on Incident

Activity 1: Create UI Policy

1. Log in to the **ServiceNow instance** with administrative or configuration access.

2. Navigate to:
   System UI → UI Policies

3. Click **New** to create a new UI Policy record.

4. Fill in the following details:

   - **Name**: High Impact Control
     This name clearly represents the purpose of the policy, which is to apply additional controls when an Incident has a high impact.

   - **Table**: Incident

UI Policies | Order | Search | Actions on selected rows... | New

Short description	Table	Conditions	Reverse if false	On load	Updated	Order
UI Policy to hide related feature flags when hidePagination set to true	UX List [sys_ux_list]	hide_pagination=true^EQ	true	true	2021-08-16 14:02:50	0
Mark fields as mandatory without DB override	Security tasks [sn_vsc_security_task]		false	true	2025-01-28 14:28:42	0

Task 2: Create UI Policy Action – Urgency

Activity 1: Configure the Urgency Field

1. **Open the UI Policy Actions**
   Go to the **High Impact Control** UI Policy you created earlier. Scroll down to the **UI Policy Actions** related list. This is where you define the specific behavior of fields when the policy conditions are met.

2. **Create a New Action**
   Click **New** to create a UI Policy Action. This lets you configure how individual fields behave when the UI Policy is triggered.

3. **Fill in the Action Details**

   - **Field name:** Urgency
     Select the **Urgency** field on the Incident form. This is the field you want to control.

   - **Read only**: true
     Check this option to make the Urgency field read-only whenever the UI Policy condition is met (Impact = High). Users will be able to see the field but cannot change its value.

}

1. **Navigate to Client Scripts:**
   Go to System UI → Client Scripts.

2. **Click New** to create a new Client Script.

3. **Fill in the details:**

   - **Name:** Auto set urgency for high impact – clearly shows the purpose.
   - **Table:** Incident – the script runs only on Incident records.
   - **Type:** onChange – executes when a field value changes.
   - **Field name:** Impact – triggers the script when Impact is updated.
   - **Active:** true – ensures the script runs immediately.

4. **Paste the script** in the script editor section.

5. **Click Submit** to save the Client Script.

6. **Verify:** Open an Incident record and change the Impact field to **High**. The Urgency field should update automatically

Script:

```
function onChange(control, oldValue, newValue, isLoading) {

  if (isLoading || newValue == '') {

    return;
```

Client Script
New record

Submit

New client-scripts are run in strict mode, with direct DOM access disabled. Access to jQuery, prototype and the window object are likewise disabled. To disable this on a per-script basis, configure this form and add the "Isolate script" field. To disable this feature for all new globally-scoped client-side scripts set the system property "glide.script.block.client.globals" to false.

Task 3: Create onChange Client Script

Activity 1: Create Client Script

1. **Navigate to Client Scripts:**
   Go to System UI → Client Scripts.
2. **Click New** to create a new Client Script.
3. **Fill in the details:**
   - **Name:** Auto set urgency for high impact – clearly shows the purpose.
   - **Table:** Incident – the script runs only on Incident records.
   - **Type:** onChange – executes when a field value changes.

Conclusion

1. **Navigate to Client Scripts:**
   Go to System UI → Client Scripts in your ServiceNow instance.

2. **Click New** to create a new Client Script.

3. **Fill in the details:**

   - **Name:** Prevent save if Assigned To missing – clearly indicates that the script prevents saving if the field is empty.
   - **Table:** Incident – applies the script only to Incident records.
   - **Type:** onSubmit – executes when the user tries to save the record.
   - **Active:** true – ensures the script is enforced immediately.

4. **Paste the script** into the script editor section. This script should check if the **Assigned To** field is empty and prevent the record from saving if it is.

5. **Click Submit** to save the Client Script.

6. **Verify:** Try saving an Incident without filling the **Assigned To** field. The script should prevent the save and display a warning.

7. Paste the script:

```
function onSubmit() {
```

Extensions Help

1. **Navigate to Client Scripts:**
   Go to System UI → Client Scripts in your ServiceNow instance.

2. **Click New** to create a new Client Script.

3. **Fill in the details:**

   - **Name:** Prevent save if Assigned To missing – clearly indicates that the script prevents saving if the field is empty.

   - **Table:** Incident – applies the script only to Incident records.

   - **Type:** onSubmit – executes when the user tries to save the record.

   - **Active:** true – ensures the script is enforced immediately.

4. **Paste the script** into the script editor section. This script should check if the **Assigned To** field is empty and prevent the record from saving if it is.

5. **Click Submit** to save the Client Script.

6. **Verify:** Try saving an Incident without filling the **Assigned To** field. The script should prevent the save and display a warning.

Client Script
New record

Submit

New client-scripts are run in strict mode, with direct DOM access disabled. Access to jQuery, prototype and the window object are likewise disabled. To disable this on a per-script basis, configure this form and add the "Isolate script" field. To disable this feature for all new globally-scoped client-side scripts set the system property "glide.script.block.client.globals" to false.
